

## Job Spec: Dev Ops Engineer

### About Edge

Edge is a data-driven technology platform. We have revolutionised how people contract talent, pay gamers, and collect social media and in-game data to allow businesses to operate more efficiently and intelligently.

Edge is a well-capitalized startup with more than 50 years of experience in technology and gaming. It was founded by a former sports lawyer, a former Nintendo executive and a 16-year-old tech-wizard. Edge is LDN based but has team members in the US, Middle East and Asia.

Our core values are:

1. Team First
2. Community is everything
3. No assholes

### Salary

£40k - 60k p/a

### What you'll do

- Architecting, implementing/updating solutions, building and executing test plans
- Integrating network, infrastructure and operations concepts to deliver our products
- Improve our monitoring platforms and use this data as a source for further optimization of our backend
- Extend our CI/CD pipelines to push code to production faster and safer

### Our tech stack

- Languages/Frameworks - NodeJS, Java, Python, Go, ReactJS, React Native

- Databases - MongoDB, PostgreSQL, Redis
- AWS tools - ECS, Fargate, ELB, DocumentDB, ElastiCache, SQS, Route53, QLDB, S3, Cloudfront
- CI tools - GitHub actions

## What we require

You love solving complex interdisciplinary backend challenges. You automate anything you might possibly have to do twice. You get things done and own what you build. You don't agree with the status quo. You're a craftsman and embrace failure as an essential part of success. You take people for who they are and celebrate diversity. Does this sound like you? Read on.

- 2+ years of practical operational experience in a DevOps or engineering role
- You have a passion for what you do and you're nice to hang out with
- Experience with AWS ecosystem
- Experience in relational and NoSQL databases. PostgreSQL and MongoDB is a plus
- Experience managing/building, fully-automated infrastructure-as-code landscapes
- Experience with continuous integration tools and processes (we use GitHub actions for the majority of tasks at the moment)
- Self-motivated and hold a proactive attitude

## Nice to haves

- Interest in esports/streaming
- Experience working remotely

## What we offer

- Fully remote work
- Flexible working hours
- Unlimited holiday
- Working with a set of passionate, driven individuals who are all about the team mentality
- The opportunity to be early into an exciting startup and help build some really innovative tech
- Weekly social events
