

Job Spec: QA Engineer

About Edge

Edge is a data-driven technology platform. We have revolutionised how people contract talent, pay gamers, and collect social media and in-game data to allow businesses to operate more efficiently and intelligently.

Edge is a well capitalized startup with more than 50 years experience in technology and gaming. It was founded by a former sports lawyer, a former Nintendo executive and a 16 year old tech-wizard. Edge is LDN based but has team members in the US, Middle East and Asia.

Our core values are:

- 1) Team First
- 2) Community is Everything
- 3) No assholes.

You love solving complex interdisciplinary challenges. You automate anything you might possibly have to do twice. You get things done and own what you build. You don't agree to the status quo. You're a craftsman and embrace failure as an essential part of success. You take people for who they are and celebrate diversity. Does this sound like you? Read on.

Salary

£40k - 60k p/a

What you'll do

- Thoroughly test all software releases under your charge, which can include client and server side products, API platform and server infrastructure.
- Report and track defects, prepare test plan reports, sign off on releases.
- Help define, implement and drive adoption of QA best practices and processes
- You'll implement software testing processes across many projects, working with engineers on code quality through exploratory and automated tests
- You will be able to provide guidance across different paradigms (backed, frontend, mobile)

- You will discuss and evangelize the benefits of a proper testing culture inside teams, spanning from unit tests to integration tests to end-to-end tests
- Lead the development of a number of automated testing suites
- Work with the product team to understand requirements, design comprehensive test plans and test cases

Our tech stack

- Languages/Frameworks - NodeJS, Java, Python, Go, ReactJS, React Native
- Databases - MongoDB, PostgreSQL, Redis
- AWS tools - ECS, Fargate, ELB, DocumentDB, Elasticache, SQS, Route53, QLDB, S3, Cloudfront
- CI tools - GitHub actions

What we require

- 2+ years of practical operational experience in a QA engineer or similar engineering role
- You have passion for what you do and you're nice to hang out with
- Detailed orientated philosophy working to the highest standards
- Highly skilled in software QA methodologies, processes, tools and best practices
- Experience with stress and load testing
- Experience with continuous integration tools and processes (we use GitHub actions for the majority of tasks at the moment)
- Ability to build QA processes & suites from scratch
- Self motivated and hold a proactive attitude
- Extensive hands-on experience with programming in any modern language

Nice to have

- An interest in esports / streaming
- Experience in relational and NoSQL databases. PostgreSQL and MongoDB is a plus
- Experience working remotely
- Experience with AWS ecosystem

What we offer

- Fully remote work
- Flexible working hours
- Unlimited holiday
- Working with set of passionate, driven individuals who are all about the team mentality
- The opportunity to be early into an exciting startup and help build some really innovative tech
- Weekly social events
